

C 90

C90 log splitters are the result of the evolution of the classic style of log splitter. With 8.5 tons of power, the thin blade with a sharp incline angle is very effective. The large table provides practical workspace. Aluminium inserts on the base of the table allow for precise working during the splitting phase. The stroke of the wedge is adjustable via a clamp making it possible to save cycle time. The PLUS model, with its double pump, guarantees a very high-efficiency thanks to the automatic double speed. On the side of the operating levers, there are supports for placing the logs without having to pick them up from the ground each time.
